Bemærk, at denne meddelelse kun gælder for specifikke produktkoder og ikke berører alle produktkoder for de ovennævnte produkter.

Beskrivelse af problemet:

ConvaTec har frivilligt iværksat en tilbagekaldelse af specifikke produktkoder for de ovennævnte produkter.

En intern vurdering af kvaliteten af disse produkters emballage har bekræftet, at disse produkter ikke lever op til vores egne eller vores kunders forventninger.

ConvaTec har ikke modtaget nogle rapporteringer om hændelser vedrørende emballagens forsegling, men produkternes emballage bestod ikke en transporttest. Dette bekræfter, at risikoen for, at der kan opstå et brud på den sterile barriere under transport er til stede. Brugen af et ikke-sterilt produkt kan udsætte patienter for bakterier og øger patientens risiko for at udvikle en infektion.

Produktbeskrivelser

Rektalsonder er sterileengangsprodukter , der indføres via rektum for at lede afføring, udføre tarmskylning, administrere medicin og/eller lavementer i den nederste del af tarmen, til kolonoskopiundersøgelse og til dekompression af colon.

Unoversal drænagesystemer er beregnet til sådrænage ved hjælp af lavt vakuum, hvor der forventes en mellemstor eller lille postoperativ blødning. Produktet er til engangsbrug og er beregnet til kortvarig behandling.

SimpaVac er en beholder, som er beregnet til postoperativ sådrænage med lavt vakuum under almindelig (åben) kirurgi.

Sterile sugeforbindesslanger er beregnet til at forbinde to enheder (f.eks. sugehåndtag og beholdere) eller som forlængelse mellem en enhed og en vakuumkilde.

Sterile forbindelsesstykker er beregnet til at forbinde to enheder, som f.eks. sugehåndtag og opsamlingsbeholdere.

Sugehåndtag og sæt (FilterFlow™/Deltaflo) er et produkt, der primært er beregnet til ortopædkirurgiske indgreb for at fjerne og indsamle debris og knoglefragmenter samt cement, marv og blodkoagler. Filtreringen sikrer, at sugeanordningen ikke blokerer under anvendelse.

Iltkatetre er produktertil brug på patienter, som har behov for kortvarig iltbehandling, hvor der gives ilt (ved lave koncentrationer) direkte via næsen.

Sterile iltbriller er beregnet til indgift af lave koncentrationer af ilt via næseborene.

Sterile iltforbindelsesslanger er beregnet til indgift af ilt ved lave eller mellemhøje koncentrationer i forbindelse med iltbehandling. Forbindelses-/forlængelsesslangerne fører ilt fra en stationær eller mobil iltforsyningsanordning til patienten via en dispenseringsanordning. Dispenseringsanordninger kan for eksempel være katetre, iltbriller eller iltmasker. Brug af forbindelses-/forlængelsesslanger mellem patientdispenseringsanordningen og forsyningsanordningen giver patienten mere bevægelsesfrihed uden afbrydelse af iltflowet.

Sterile pincetter: Dette er engangspincetter til forskellige formål. De bruges ved kliniske indgreb til at tage fat om, manipulere eller fjerne debris, partikler eller sårvæv.

Fremgangsmåde for identifikation af produkter:

Kun de produktdelskoder, der er anført i denne meddelelse, har potentiale for brud på emballagens sterile barriere.

Af denne årsag, og for at forebygge en eventuel risiko for personskade, må **ingen af de berørte produkter anvendes**.

Den eneste måde at identificere berørte produkter på er at sammenligne produktkode/REF og LOT/batchnummer med listen over tilbagekaldte produkter (se bilag 1). Der er ingen andre synlige forskelle mellem berørte og ikke-berørte produkter.

I bilag 2 findes eksempler på emballagemærkning, hvor placeringen af produktkoden og LOT/batchnummeret på mærkaterne er fremhævet. De sidder på den primære emballage og forsendelsesæsken. Produktkoden (referencenummeret) begynder med bogstaverne "REF", og

LOT/batchnummeret begynder med symbolet

Anbefalet handling, som slutbrugeren skal iværksætte.
