

## Vigtig produktinformation om korrigerende handling for medicinsk udstyr

Lad ikke alkoholbaserede opløsninger komme i kontakt med indføringsnåle ved brug af Arrow-kit

**Arrow®-kit og sæt med indføringsnåle**  
EIF-000468-02

April 2022

**Til: Kunder til Arrow -kit og sæt med indføringsnåle**

**VIGTIGT**– Send en kopi af denne meddelelse til følgende personale i din organisation som minimum: Anæstesiologisk afdeling, intensivafdelinger (voksen, pædiatrisk, neonatal), skadestue, koronarafdeling, karadgangsservice, operationsstue/service, kirurgisk afdeling, afdeling for reservelægeuddannelse.

**Enhed: Arrow®-kit og sæt med indføringsnåle**

(Der henvises til bilag 2 for en liste over produktkoder og -beskrivelser)

**Omfang:** Teleflex og dets datterselskab Arrow International udsteder denne produktinformation for kit og sæt med indføringsnåle.

**Emne: Revnet indføringsnål**

**Sammenfatning af problemet:** Teleflex har modtaget reklamationer, som indberetter, at indføringsnålens muffe i nogle Arrow®-kit revner ved belastning under kateterisationsproceduren. Teleflex har identificeret følgende praksis, der kan øge risikoen for revner, herunder

- 1) Kontakt mellem nålemuffen og våd, kutan antiseptisk alkoholbaseret opløsning (dvs.: Chlorhexidinbaseret antiseptisk middel (CBA)/octenidinopløsning)
- 2) Hældning af alkoholbaseret opløsning (dvs.: Chlorhexidinbaseret antiseptisk/octenidinopløsning) over handskerne på klinikerens, der foretager indføring af anordningen
- 3) Brug af alkoholbaserede antiseptiske opløsninger (dvs.: Chlorhexidinbaseret antiseptisk/octenidinopløsning) i stedet for ultralydsgel
- 4) Anvendelse af chlorhexidinbaseret antiseptisk middel i kombination med octenidin gennem en sprayflaske, som medfører direkte kontakt mellem det antiseptiske middel og nålemuffen

Denne kliniske praksis kan sammen med mangel på tilstrækkelig tørretid overeksponere nålemuffen for alkoholbaserede antiseptiske opløsninger, såsom chlorhexidinbaseret antiseptisk/octenidinopløsning. Hvis nålemuffen er mættet med en antiseptisk opløsning, kan den blive svækket. En svækket nålemuffe kombineret med standardindføringsmetoden, som kræver, at der påføres tryk på nålen, kan medføre en revnet nålemuffe.

Hvis en revnet nålemuffe ikke opdages inden brug, kan klinikerer opleve falske tegn på en mulig indføringsrelateret pneumothorax. Desuden kan klinikerer muligvis ikke aspirere en flashback af blod under indføring af nålen.

Teleflex anbefaler ikke brug af en alkoholbaseret antiseptisk opløsning i stedet for en godkendt ultralydsgel til invasive procedurer. Teleflex anbefaler desuden, at man følger god klinisk praksis for antisepsis af huden, hvilket omfatter tilstrækkelig **tørretid** (dvs. tre minutter eller mere) til antisepsis af huden **før** indføring af nålen.

**Påkrævet handling:**

Vores optegnelser angiver, at du har modtaget produkter, som er omfattet af denne produktinformation.

1. Send som minimum en kopi af denne meddelelse til følgende personale i din organisation for at sikre, at alle klinikere er bekendt med den identificerede risiko: Anæstesiologisk afdeling, Intensivafdelinger (voksen, pædiatrisk, neonatal), Skadestue, Koronarafdeling, Karadgangsservice, Operationsstue/service, Kirurgisk afdeling, Afdeling for reservelægeuddannelse. Hvis du har distribueret produktet til et andet sted, bedes du sende en kopi af dette brev til alle kunder.
2. Du bedes stille spørgsmål angående klinisk uddannelse og produktsupport til [clinical.affairs.emea@teleflex.com](mailto:clinical.affairs.emea@teleflex.com).
3. Bekræft modtagelsen af denne vigtige produktinformation: Udfyld den vedlagte bekræftelsesblanket (bilag 1), og returner blanketten til det faxnummer eller den e-mailadresse, der findes øverst på blanketten.

**Relevante lande:** Baseret på oprindelsen af de indberettede reklamationer og den identificerede kliniske praksis blev denne vigtige produktinformation om korrigerende handling for medicinsk udstyr først sendt til kunder i Tyskland og Østrig i februar 2022. Teleflex udvider denne meddelelse for at underrette kunder, der har modtaget de berørte produkter i det europæiske økonomiske samarbejdsområde, Schweiz, Tyrkiet og Det Forenede Kongerige.

**Begrænsning af risiko:** Korrigerende handlinger implementeres på produktionsfaciliteten med henblik på at reducere risikoen for revner, når nålen eksponeres for alkoholbaserede opløsninger.

Teleflex og Arrow International bestræber sig på at levere sikre og effektive produkter i høj kvalitet. Vi beklager dybt enhver ulemage, dette måtte medføre for dig.

For og på vegne af Teleflex og Arrow International,

*Padraig Hegarty*

## Bilag 2: Berørte produkter for EIF-000468-02

### Arrow-kit og sæt med indføringsnåle:

- Kit og sæt til centralvenekateterisation (CVC)
- Kit og sæt til hæmodialysekateterisation
- Kit og sæt til kateterindføring i kar
- Perifert indførte CVC-kit og -sæt
- Midlertidige ballonkatetre til hjertepacing
- Kanyler til perifere arterier
- Skyllekatetre
- Intra-aortiske ballonkatetre
- Kit til spinal-/epiduralanæstesi
- Incisions-/drænagekit
- Kateterisationskit til pleural/peritoneal drænage
