2. Reason for Field Safety Corrective Action (FSCA)	
2.	<p>1. Description of the product problem</p> <p>°MEQU A/S has received reports of incidents involving overheating of the °M Warmer. The investigation concluded that the failure occurred due to an incorrectly assembled sealing, causing an internal leak of fluids inside the °M Warmer, which may cause the °M Warmer to overheat. In case this happens, the °M Warmer's LED light turns flashing red, indicating that the safety circuit has been triggered due to overtemperature. In such a case immediately disconnect the °M Warmer from the power source and replace with a new °M Warmer. If undetected the overheating may cause hot fluids to leak from the °M Warmer, potentially causing skin burn on the patient.</p>
2.	<p>2. Hazard giving rise to the FSCA</p> <p>An incorrectly assembled sealing can cause leak during use which may lead to overheating. This has a potential for causing skin burns on the patient if undetected.</p>
