

## Part VI: Summary of the risk management plan

### Summary of risk management plan for dasatinib

This is a summary of the risk management plan (RMP) for dasatinib. The RMP details important risks of dasatinib and how more information will be obtained about dasatinib's risks and uncertainties (missing information).

Dasatinib's summary of product characteristics (SmPC) and its package leaflet give essential information to healthcare professionals and patients on how Dasatinib should be used.

#### I. The medicine and what it is used for

The Applicant's Dasatinib is authorised for the treatment of (i) adult patients with newly diagnosed Philadelphia chromosome positive (Ph+) chronic myelogenous leukaemia (CML) in the chronic phase (CP; Ph+ CML-CP), (ii) adult patients with chronic, accelerated or blast phase CML with resistance or intolerance to prior therapy including imatinib mesilate, (iii) adult patients with Ph+ acute lymphoblastic leukaemia (ALL) and lymphoid blast CML with resistance or intolerance to prior therapy, iv) paediatric patients with newly diagnosed Ph+ CML-CP or with Ph+ CML-CP resistant or intolerant to prior therapy including imatinib, and v) paediatric patients with newly diagnosed Ph+ ALL in combination with chemotherapy (see SmPC for the full indication). It contains dasatinib as the active substance and it is given orally.

#### II. Risks associated with the medicine and activities to minimise or further characterise the risks

Important risks of dasatinib, together with measures to minimise such risks and the proposed studies for learning more about dasatinib's risks, are outlined below.

Measures to minimise the risks identified for medicinal products can be:

- Specific information, such as warnings, precautions, and advice on correct use, in the package leaflet and SmPC addressed to patients and healthcare professionals;
- Important advice on the medicine's packaging;
- The authorised pack size — the amount of medicine in a pack is chosen so to ensure that the medicine is used correctly;
- The medicine's legal status — the way a medicine is supplied to the patient (*e.g.* with or without prescription) can help to minimise its risks. Dasatinib is subject to restricted medical prescription.

Together, these measures constitute *routine risk minimisation* measures.

In addition to these measures, information about adverse reactions is collected continuously and regularly analysed so that immediate action can be taken as necessary. These measures constitute *routine pharmacovigilance activities*.

If important information that may affect the safe use of dasatinib is not yet available, it is listed under 'missing information' below.

## II.A List of important risks and missing information

Important risks of dasatinib are risks that need special risk management activities to further investigate or minimise the risk, so that the medicinal product can be taken safely. Important risks can be regarded as identified or potential. Identified risks are concerns for which there is sufficient proof of a link with the use of dasatinib. Potential risks are concerns for which an association with the use of this medicine is possible based on available data, but this association has not been established yet and needs further evaluation. Missing information refers to information on the safety of the medicinal product that is currently missing and needs to be collected (e.g. on the long-term use of the medicine);

### List of important risks and missing information

Important identified risks	Bleeding-related events <i>Fluid retention</i> Myelosuppression Pregnancy-related malformative or foeto/neonatal toxicity <i>Pulmonary arterial hypertension (PAH)</i> QT prolongation
Important potential risks	CYP3A4 drug interactions Direct cardiotoxic effects (e.g. <i>Cardiomyopathy</i> ) Growth and development disorders and bone mineral metabolism disorders in the paediatric population Hepatitis B virus (HBV) reactivation <i>Nephrotic syndrome</i> Severe hepatotoxicities Toxic skin reactions
Missing information	Carcinogenicity Paediatric data for patients < 1 year of age Reproductive and lactation data

## II.B Summary of important risks

The safety information relevant to the authorised indications in adults in the proposed Product Information is aligned to the reference medicinal product Sprycel<sup>®</sup> (Bristol-Myers Squibb Pharma EEIG) (2).

## II.C Post-authorisation development plan

### II.C.1 Studies which are conditions of the marketing authorisation

There are no studies which are conditions of the marketing authorisation or specific obligation of the Applicant's Dasatinib.

### II.C.2 Other studies in post-authorisation development plan

There are no studies required for the Applicant's Dasatinib.
