Part VI: Summary of the risk management plan

Summary of risk management plan for Liraglutid Zentiva 6 mg/ml Injektionslösung in einem Fertigpen (Liraglutide)

This is a summary of the risk management plan (RMP) for Liraglutid Zentiva. The RMP details important risks of Liraglutid Zentiva, how these risks can be minimised, and how more information will be obtained about Liraglutid Zentiva's risks and uncertainties (missing information).

Liraglutid Zentiva's summary of product characteristics (SmPC) and its package leaflet give essential information to healthcare professionals and patients on how Liraglutid Zentiva should be used.

Important new concerns or changes to the current ones will be included in updates of Liraglutid Zentiva's RMP.

I. The medicine and what it is used for

Liraglutid Zentiva is authorised for the treatment of adults, adolescents and children aged 10 years and above with insufficiently controlled type 2 diabetes mellitus as an adjunct to diet and exercise

- as monotherapy when metformin is considered inappropriate due to intolerance or contraindications
- in addition to other medicinal products for the treatment of diabetes

(see SmPC for the full indication)

It contains liraglutide as the active substance and it is injected subcutaneously in the abdomen, in the thigh or in the upper arm.

II. Risks associated with the medicine and activities to minimise or further characterise the risks

Important risks of Liraglutid Zentiva, together with measures to minimise such risks and the proposed studies for learning more about Liraglutid Zentiva's risks, are outlined below.

Measures to minimise the risks identified for medicinal product can be:

- Specific information, such as warnings, precautions, and advice on correct use, in the package leaflet and SmPC addressed to patients and healthcare professionals;
- Important advice on the medicine's packaging;
- The authorised pack size the amount of medicine in a pack is chosen so to ensure that the medicine is used correctly;
- The medicine's legal status the way a medicine is supplied to the patient (e.g. with or without prescription) can help to minimise its risks.

Together, these measures constitute *routine risk minimisation* measures.

In addition to these measures, information about adverse reactions is collected continuously and regularly analysed, including PSUR assessment so that immediate action can be taken as necessary. These measures constitute *routine pharmacovigilance activities*.

II.A List of important risks and missing information

Important risks of Liraglutid Zentiva are risks that need special risk management activities to further investigate or minimise the risk, so that the medicinal product can be safely administered. Important risks can be regarded as identified or potential. Identified risks are concerns for which there is sufficient proof of a link with the use of Liraglutid Zentiva. Potential risks are concerns for which an association with the use of this medicine is possible based on available data, but this association has not been established yet and needs further evaluation. Missing information refers to information on the safety of the medicinal product that is currently missing and needs to be collected (e.g. on the long-term use of the medicine).

List of important risks and missing information	
Important identified risks	• None
Important potential risks	 Neoplasms (including melanoma)
	 Medullary thyroid cancer (C-cell carcinogenicity)
	Pancreatic cancer
Missing information	• None

II.B Summary of important risks

The safety information in the proposed Product Information is aligned to the reference medicinal product.

II.C Post-authorisation development plan

II.C.1 Studies which are conditions of the marketing authorisation

There are no studies which are conditions of the marketing authorisation or specific obligation of Liraglutid Zentiva.

II.C.2 Other studies in post-authorisation development plan

There are no studies required for Liraglutid Zentiva.
