

## **PART VI- Summary of the risk management plan**

### Summary of risk management plan for Flurbiprofen STADA spray (Flurbiprofen)

This is a summary of the risk management plan (RMP) for Flurbiprofen STADA spray. The RMP details important risks of Flurbiprofen STADA spray, how these risks can be minimised, and how more information will be obtained about Flurbiprofen STADA spray's risks and uncertainties (missing information).

Flurbiprofen STADA spray 's summary of product characteristics (SmPC) and its package leaflet give essential information to healthcare professionals and patients on how Flurbiprofen STADA spray should be used.

Important new concerns or changes to the current ones will be included in updates of Flurbiprofen STADA spray's RMP.

#### **I. The medicine and what it is used for**

Flurbiprofen STADA spray is indicated for the short-term symptomatic relief of acute sore throat in adults. It contains flurbiprofen as the active substance and it is for oromucosal use.

#### **II. Risks associated with the medicine and activities to minimise or further characterise the risks**

Important risks of Flurbiprofen STADA spray, together with measures to minimise such risks and the proposed studies for learning more about Flurbiprofen STADA spray's risks, are outlined below.

Measures to minimise the risks identified for medicinal products can be:

- Specific information, such as warnings, precautions, and advice on correct use, in the package leaflet and SmPC addressed to patients and healthcare professionals;
- Important advice on the medicine's packaging;

- The authorised pack size — the amount of medicine in a pack is chosen so to ensure that the medicine is used correctly;
- The medicine's legal status — the way a medicine is supplied to the patient (e.g. with or without prescription) can help to minimise its risks. Together, these measures constitute routine risk minimisation measures.

Together, these measures constitute routine *risk minimisation* measures.

In addition to these measures, information about adverse reactions is collected continuously and regularly analysed so that immediate action can be taken as necessary. These measures constitute routine pharmacovigilance activities.

**II.A List of important risks and missing information**

Important risks of Flurbiprofen STADA spray are risks that need special risk management activities to further investigate or minimize the risk, so that the medicinal product can be safely taken. Important risks can be regarded as identified or potential. Identified risks are concerns for which there is sufficient proof of a link with the use of Flurbiprofen STADA spray. Potential risks are concerns for which an association with the use of this medicine is possible based on available data, but this association has not been established yet and needs further evaluation. Missing information refers to information on the safety of the medicinal product that is currently missing and needs to be collected (e.g. on the long-term use of the medicine);

<b>Summary of safety concerns</b>	
Important identified risks	- None
Important potential risks	- None
Missing information	- None

**II.B Summary of important risks**

The safety information in the proposed Product Information is aligned to the reference medicinal product.

**II. C Post-authorisation development plan***II.C.1 Studies which are conditions of the marketing authorisation*

There are no studies which are conditions of the marketing authorisation or specific obligation of Flurbiprofen STADA spray.

*II.C.2 Other studies in post-authorisation development plan*

There are no studies required for Flurbiprofen STADA spray.
